

# Turning up the heat on Cinematography and Android Application Development at IITGN

Bilkul News, Ahmedabad, June 6:As the temperatures soar this summer, students at the Indian Institute of Technology Gandhinagar (IITGN) are turning to cinematography, android application development, photography and various other extracurricular activities at the institute's six-week long summer camp.

During the summer break, IITGN is hosting a summer camp, which is offering courses on “Statistical Computing and Android Application Development” and “Cinema and Visual Representations.” In addition to IITGN faculty, working professionals and experts are teaching the two courses. The course on Cinema and Visual Representations is being taught by a professional photographer, Mr Sameer Bakshi, and faculty members from IIT Kanpur, Prof Satyaki Roy and Prof Shatarupa Thakurta Roy. The course on Statistical Computing and Android Application Development is taught by IITGN faculty as well as a professional from Tata Consultancy Services (TCS) Mr Goutam Mallick.

A workshop on "Design Principles" and a workshop on "Poetry" will also be held as a part of the summer camp. Apart from these, the summer camp also involves activities such as swimming, power yoga, aerobics, painting, sketching and various sports.

IITGN Prof Shankarjee Krishnamoorthi, who is one of the coordinators of the programme, said, “The Summer Camp provides an opportunity to the students to add some more skills and capabilities to their list and enhance their personalities rather than playing video games and wasting their time during the summer. More than 50 students, mostly from the undergraduate level, have signed up for taking part in the camp.”
