

Fuelling green dreams!

Gujarat's premier engineering institute believes in leading by example! Being environmentally conscious, IIT-Gn has taken every effort to design its new campus around existing trees so that no trees have to be cut. For the small number of trees that cannot be designed and built around, IIT-Gn

has successfully re-transplanted them with the latest equipment that is capable of transplanting trees up to 100cm in girth. Officials say trees that were too large or inaccessible to frame and crane method were moved using the modern tree transplanting equipment. This involved digging around the tree and fitting a special frame which was then lifted by mobile crane either to a nearby position or onto a lorry to transport the tree to its new position where it was lifted off and replanted by crane.
