

Conference on low-cost hi-tech automation:

IIT-Gandhinagar will organize a three-day conference on 'Low Cost Hi-Tech Automation' from September 25. India is poised to be major global power in manufacturing and our manufacturing industries have never-seen-before opportunities. Low cost hi-tech automation (LCHA) is probably one of the best tool techniques that can help tapping this fully. LCHA is a technology that creates some degree of automation around the existing equipment, tools, methods and people, using mostly standard components available in the market and using microelectronics & information technology to enhance system capabilities.
