New course at IITGn

Aiming to give a boost to the conservation of heritage and culture in the country, the Indian Institute of Technology, Gandhinagar (IITGn) is set to offer a first-of-its-kind course in creating three dimensional (3D) digital models at its Palaj Campus. The ten-day course has been aptly titled 3D Digitization for Cultural Heritage. A note released by the institute states that the course will focus on methods and tools of 3D digitisation and its application in heritage conservation. The course — part of the HRD Ministry's scheme on Global Initiative on Academic Network — will commence from November 30. **AM**
