

IITGn to automate all its operations through IMS

dna correspondent @dnaahmedabad

The Indian Institute of Technology Gandhinagar (IITGn) is all set to become the first IIT to fully automate its operational processes to save time and eliminate the need to physically visit different offices.

The new system Institute Management System (IMS) was launched on Friday by professor Baldev Raj, chairman, Board of Governors, IITGn.

Professor Raj said, "The system will ensure transparency and is aimed at saving time and energy for the institute's employees and students by eliminating the need to physically visit offices."

Professor Sudhir Jain, director,

IITGn, said, "The institute is set to achieve another milestone as we initiate the adoption of IMS. The full-fledged software solution is designed to propel the institute towards a paperless organisation. All processes relating to

academics, accounting and finance, research and development, procurement, alumni relations, placements of students, recruitment of faculty and staff etc. will get automated and seamlessly integrated."

Professor Pratyush Dayal added, "Although most of the older IITs in

the country have some of their operations automatised, IITGn is set to be the first among all the IITs to integrate all its processes on a common platform."

IT IS THE FIRST
IIT TO ADOPT A
COMPREHENSIVE
SYSTEM TO
ELIMINATE
THE NEED TO
PHYSICALLY
VISIT DIFFERENT
OFFICES
